# LocalLeap Digital — Project Handoff

Complete context, decisions, progress and instructions for any AI assistant or agent continuing this project. Last updated: 15 October 2026.

> **To the AI reading this:** You are taking over as the advisor and prompt-writer for a beginner who is starting a small web-design and automation studio. Read this whole document before replying. Section 1 tells you who the user is and how to work with them. Section 7 shows exactly where the project stands. Section 8 is the next task. Do not restart the plan or re-ask questions already answered here.

## 1. Who the user is and how to work with them

- A beginner founder in India starting **LocalLeap Digital**, a small online studio that sells websites and simple automations to local businesses.
- The user handles **finding and talking to clients**. A **developer friend (partner)** builds the final client websites and handles detailed pricing.
- The user has built and hosted two personal projects: **freefontfinders.com** and **wce-cgpa-to-percentage.vercel.app**.
- Budget is **zero for now**. Everything uses free tools and free hosting until the first paying client.
- The user writes informal English with typos. Understand the intent; reply in clear, simple English.

### Tools the user works with

| Tool | Used for |
|---|---|
| Google Antigravity (AI coding agent) | Building websites from detailed .md brief files that you write |
| Claude Code | Also used for building websites |
| ChatGPT image generation | Logo and images |
| Vercel / Netlify (free) | Hosting demo and portfolio sites |
| WhatsApp Business | Client outreach and communication |

### How the user wants you to work (important)

- **Deliver build briefs as detailed .md files** the user can hand straight to Antigravity: design + features + data structure + quality checks + final checklist, start to finish.
- **Real, reference-driven design, not generic "AI slop".** When the user gives reference websites, actually study them. Every brief must contain a separate **Design Direction** section derived from the references, plus an **anti-generic checklist**.
- Because you may only read the text of a website (not see it), instruct the building agent to **open the references in its browser, screenshot them, and write design-notes.md before building**, then build the hero first and compare it to the references.
- Be honest. Admit mistakes plainly and fix them. Push back kindly if the plan has a problem.
- Keep chat replies concise and practical. The user is a beginner, so explain the why briefly.

> **Known past mistake to avoid:** The cafe brief used a default warm beige/yellow palette and generic icon-card layouts instead of following the reference sites. The user called the result "AI slop". Every brief from now on must follow the reference-driven design process described in Section 6.

## 2. The business model

- Sell websites + simple automations to local businesses: **dentists first**, then clinics/doctors, cafes, restaurants, gyms, salons.
- **Demo-first outreach:** find a business with good Google reviews (around 40+) but no website, build a quick personalised demo from a reusable template (about 30 minutes), send it on WhatsApp or show it in person, and offer to build the real site.
- Present as a small, honest two-person studio: one person handles clients, the other builds. Never pretend to be a large agency.
- When a client says yes, the developer partner builds the real customised website.
- Revenue idea: one-time setup fee + yearly hosting/maintenance fee. Collect about **50% advance** before work starts.

### Services offered

| Websites | Simple automations (basic, not deep AI) |
|---|---|
| One-page business website<br>Multi-page website<br>Google Business Profile setup/improvement<br>Yearly hosting & maintenance | Click-to-WhatsApp / click-to-call buttons<br>Booking forms linked to Google Calendar/Sheets<br>Instant notification when a form is filled<br>Appointment reminders<br>Automatic Google review requests<br>Simple website FAQ chatbot<br>WhatsApp Business auto-replies & quick replies |

Rule: only list automations the partner can actually deliver and has tested. Describe them by outcome ("fewer missed appointments"), not technology.

## 3. Brand identity (final)

| Item | Decision |
|---|---|
| Name | **LocalLeap Digital** (temporary but chosen; spelled exactly like this) |
| Logo | Done (made with ChatGPT). Navy map-pin with a teal upward arrow inside; "Local" in navy + "Leap" in teal, bold rounded sans; "DIGITAL" spaced underneath. Use the pin icon alone for WhatsApp profile and favicon. |
| Primary – Deep Navy | #01315E — logo, headings, navigation, footer |
| Secondary – Fresh Teal | #05B0B5 — icons, accents, highlights |
| Action – Dark Teal | #008F94 — buttons and links (white text) |
| Soft background – Ice White | #F3FAFA — sections, cards |
| Body text – Slate | #334155 |
| Background | #FFFFFF |
| Fonts | Headings & buttons: Poppins (SemiBold/Bold/Medium). Body: Inter. |
| Colour balance | 60% white, 25% navy, 10% teal, 5% dark teal |

## 4. Business rules and decisions already made

- **Honesty:** no fake stats, testimonials, client logos, awards or counters on the agency site. Sample sites are labelled **"Concept Project"**. A hidden testimonials section can be switched on once real reviews exist.
- **Original designs only:** use references for inspiration; never copy layouts, text, images or brand names. Images only from Unsplash/Pexels (commercial use), credited in CREDITS.md.
- **Every sample site** has: a dismissible "Concept website by LocalLeap Digital" banner, a footer credit linking to the agency site, a **noindex** flag for demos, all content in data/config files so it works as a reusable template, and WhatsApp-based working features.
- **Demo WhatsApp number** in sample sites is set to LocalLeap's own number, so when a prospect tests a booking/order, the message reaches the user and starts a conversation.
- **Pricing:** the partner gives detailed quotes, but the user must agree a "starts from ₹___" figure with the partner so they can answer instantly.
- **Partner agreement in writing** before any money: roles, money split (including renewals), payment terms, revisions, support, timelines.

### Hosting facts (checked October 2026 — re-verify before relying on them)

- **Vercel Hobby (free):** up to 200 projects, but intended for personal, non-commercial use. Fine for concept demos; real paying client sites (and arguably the agency site) should move to paid or commercial-friendly hosting.
- **Netlify Free:** no stated site limit, but newer accounts get 300 credits/month shared across all sites (each production deploy about 15 credits, bandwidth billed in credits). When credits run out, sites pause until the next month.
- Plan: host demos on Vercel, keep Netlify as backup, include proper hosting cost in client maintenance fees.

## 5. Outreach plan (for when samples are ready)

- Search Google Maps for dentists (then other niches). Pick clinics with strong reviews and no website. Track leads in a sheet: clinic, doctor, phone, area, reviews, has website, demo link, date contacted, reply, follow-up date, status.
- WhatsApp: personalised messages in small batches (about 10–15/day). Mass messaging unknown numbers risks reports and an account ban.
- Also visit clinics in person (quiet hours, early afternoon) and show the demo on the phone.
- Follow up after about 3 days and again after about a week. Sell outcomes: more patients, found on Google, professional look, more bookings.
- Expect a low reply rate at first; 2–3 clients from 50 contacts is a good start.

> **Sample first message:** "Hi Dr. Sharma, I came across your clinic on Google and saw your great reviews, but couldn't find a website. I made a sample site for your clinic to show what it could look like: [link]. No obligation, just let me know if you'd like to talk about it." — [Name], LocalLeap Digital

## 6. Standard structure for every website brief (.md)

Use this structure for all future briefs (gym, dentist, redone cafe, client sites):

| Part | What it must contain |
|---|---|
| Project overview | Fictional business name, tagline, type, location placeholder, hours, purpose for LocalLeap, reusable-template goal |
| A. Design Direction | A1 required process: agent opens every reference URL in its browser at 1440px and 390px, screenshots hero/first scroll/key sections/footer, writes design-notes.md (real hex colours, fonts, spacing, image treatment), builds the hero first, compares, refines, then continues section by section.<br>A2 table: what to take / leave from each reference.<br>A3 palette derived from the references and the niche (with usage and balance %).<br>A4 typography (specific, non-default fonts; banned defaults).<br>A5 signature motifs that make it unique.<br>A6 copy tone + banned clichés.<br>A7 layout rules.<br>A8 motion.<br>A9 anti-generic checklist (fail conditions).<br>A10 photography rules. |
| B. Content & features | Tech stack (React + Vite + Tailwind, static), data files list, every section in order with real copy, working WhatsApp automations (booking/order/enquiry with formatted messages), floating WhatsApp + mobile action bar, FAQ, concept banner, footer credit |
| C. SEO, quality, handover | Title/meta, OG image (WhatsApp preview), JSON-LD schema, noindex flag, Lighthouse targets (Perf 90+, A11y 95+), test widths 360/390/768/1024/1440, no dead links, screenshots folder for the portfolio, README with rebranding steps, final checklist, list of placeholders |

## Global anti-generic rules (apply to every site)

- No single beige/cream colour dominating the site; no purple/blue gradients, gradient text or glowing blobs.
- No rows of identical icon-in-circle feature cards; no emoji as interface icons; no pill buttons + rounded-2xl + soft shadow on everything; not everything centred.
- No clichés ("culinary journey", "elevate", "look no further"), no lorem ipsum, no dummy social links, no stock photos that don't match the niche.

## 7. Progress so far

| Item | Status | Notes |
|---|---|---|
| Business plan and niche (dentists first) | **DONE** | Demo-first WhatsApp + in-person outreach |
| Agency name | **DONE** | LocalLeap Digital |
| Logo + colour palette + fonts | **DONE** | See Section 3 |
| Launch checklist PDF | **DONE** | Agency_Launch_Checklist.pdf |
| Agency website brief | **DONE** | LocalLeap_Digital_Website_Brief.md |
| Agency website | **DONE** (built) | Built with Antigravity. **Not hosted yet** — will host at the end. Projects added later via src/data/projects.js |
| Cafe sample brief | **DONE** | Cafe_Sample_Website_Brief.md — "Brew & Bloom Cafe" |
| Cafe sample website | **DONE** / **REDO** | Built, but the design looks generic. Rewrite the brief with the Section 6 process (references: dellaresorts.com/cafe24, bombaytobarcelonalibrarycafe.com, earthcafeindia.com, bayleafcafe.in) and rebuild |
| Restaurant sample brief | **DONE** | Restaurant_Sample_Website_Brief.md — "Ambari — Kolhapuri Kitchen" |
| Restaurant sample website | **NEXT** | User is building it now in Antigravity |
| Gym sample brief + website | **TO DO** | Ask the user for 3–4 reference gym websites first |
| Dentist sample brief + website | **TO DO** | **Most important** — must be a reusable template for 30-minute personalised demos. Ask for reference dental sites |
| Add 4 samples to agency site | **TO DO** | Screenshots + live links, labelled Concept Project |
| Host everything | **TO DO** | Vercel (demos), see hosting facts |
| WhatsApp Business profile | **TO DO** | Name, pin-icon logo, description, catalogue, greeting/away messages, quick replies |
| Partner agreement + starting price | **TO DO** | In writing |
| Lead list (30–50 dentists) + tracker sheet | **TO DO** | |
| Start outreach | **TO DO** | Can start once the dentist demo template is ready |

## 8. What to do next (for the AI)

- Support the user while they build the restaurant site: help review screenshots, fix design issues, and write follow-up prompts for Antigravity.
- Next brief: **gym** sample (ask for reference sites first), then the **dentist** template (highest priority for sales), then a rewritten **cafe** brief.
- After the samples: give the exact prompt to update the agency site's **projects.js**, then help with hosting, WhatsApp Business setup and the lead list.
- Always deliver briefs as downloadable .md files following Section 6.

### Prompt the user can use to add projects to the agency site later

```
"Update src/data/projects.js: replace the placeholder for dental with name ___, live URL ___,
and screenshot /public/projects/dental.png (I've added the file). Do the same for cafe,
restaurant and gym. Don't change any layout code."
```

## 9. Key specs of the briefs already written

### Agency website (LocalLeap Digital) — built

Single page, React + Vite + Tailwind, content in src/data (site.js, services.js, projects.js, faqs.js). Sections: sticky header with WhatsApp button → hero ("Helping Local Businesses Grow Online.", Get a Free Demo / See Our Work) → why-you-need-this strip → services (websites + automations) → industries chips → Our Work grid from projects.js with Concept Project badges and filters → How It Works (Free Demo, Discuss, Confirm with 50% advance, Build & Review, Launch) → Why Choose Us → About (two-person team) → optional pricing teaser (off by default) → FAQ → contact (WhatsApp + free form service) → navy CTA band → footer → floating WhatsApp. No fake stats or reviews.

### Cafe sample (Brew & Bloom Cafe) — built, needs design redo

Features to keep when redoing: on-page menu (tabs, search, filters, Indian veg/non-veg markers, ~45 items) instead of a PDF menu; WhatsApp order cart with formatted message; table booking via WhatsApp with slots within opening hours; live Open now/Closed badge in Asia/Kolkata time; gallery lightbox; reviews; events enquiry; FAQ; map; config-driven template. Replace the generic warm beige design with a reference-driven Design Direction.

### Restaurant sample (Ambari — Kolhapuri Kitchen) — being built

References: ITC Maratha, Pravasa Hotels, Usha Dining, Lucky Restaurant. Design: Paithani-silk palette — Peacock Ink #0C2B33 (dominant), Deep Teal #123D47, Ruby #7E1631 (buttons), Zari Gold #C8A04A (thin lines only), Ivory #F4EEE3, Charcoal #1E1B18, Stone #857A6F. Fonts: Cormorant Garamond (display), Jost (UI/body), Tiro Devanagari Marathi (single-word Marathi accents). Motifs: arch-shaped image frames, SVG jaali lattice texture, gold zari border dividers, numbered chapters. Features: thali showcase with spice levels and Tambda/Pandhra Rassa explainer, editorial printed-style menu (~50 items), WhatsApp order cart (dine-in/takeaway/delivery), reservation with meal period → time slots + occasion + seating, live lunch/dinner status, celebrations & catering enquiry, rotating single-quote reviews, separate lunch/dinner hours table, Restaurant JSON-LD.

## 10. Files the user has (attach them with this PDF if possible)

| File | Purpose |
|---|---|
| Agency_Launch_Checklist.pdf | Everything to finish before contacting dentists |
| LocalLeap_Digital_Website_Brief.md | Agency website build brief |
| Cafe_Sample_Website_Brief.md | Cafe sample brief (design section to be rewritten) |
| Restaurant_Sample_Website_Brief.md | Restaurant sample brief (current template for future briefs) |
| LocalLeap_Digital_Logo.png | Final logo |

> **Summary for the AI:** Brand and agency site are done. Cafe is built but needs a design redo. Restaurant is being built now. Gym and dentist briefs are next (dentist is the priority for sales). Then: add samples to the agency site, host, set up WhatsApp Business, agree pricing with the partner, build the lead list and start outreach. Always write reference-driven, anti-generic briefs as .md files.
